Model Optimization and Tuning Phase

The Model Optimization and Tuning Phase involves refining machine learning models for peak performance. It includes optimized model code, fine-tuning hyperparameters, comparing Perform ancemetrics, and justifying the final mode lselection for enhanced predictive accuracy and efficiency.

Final Model Selection Justification (2 Marks):

Final Model	Reasoning
Logistic Regression	<p>The Logistic Regression model was selected for its superior performance,exhibiting high accuracy during hyperparameter tuning. Its ability to handle complex relationships, minimize overfitting, and optimize predictive accuracy aligns with project objectives,justifying its selection as the final model.</p>
